Alexis R. Abramson

One of the major initiatives of the current Capital Campaign was the West End Campus Expansion. Included in the plan was a \$200-million project to integrate experiential learning in engineering, computer science, and entrepreneurship. Accordingly, a new building was completed last year and is shared by the Thayer School of Engineering, the Department of Computer Science, and the Magnuson Center for Entrepreneurship.

During the building process, in mid-2019, Dartmouth hired **Alexis Abramson** as the 13th Dean of the Thayer School of Engineering. In this position, she is leading an expansion of the school, putting human-centered engineering at the heart of the engineering education, research and practice.

Prior to joining Dartmouth, she was the Maltz Professor of Energy Innovation at Case western Reserve University and served as a director of the university's Great Lakes Energy Institute. During the Obama administration, Alexis held the role as chief scientist and manager of the Emerging technologies Division at the U.S. Department of Energy's Building Technologies Program. In 2018, she also served as technical adviser for Breakthrough Energy Ventures, a \$1 billion effort launched by Bill Gates to combat human-driven climate change.

Alexis will share with us the exciting changes happening at the Thayer School of Engineering.
